Problem, Users, and Purpose

Problem

Personal growth goals are difficult to turn into consistent actions

Users

Students, young professionals seeking structured and personalised growth

Purpose

Transforms personal growth into manageable, personalised quests

Storyline | Your Reaction | Reflection | Challenge

Your arrows are useless and your club cannot pierce its hide. The lion turns on you, and the fear rises. Your weapons have failed — how do you meet it?

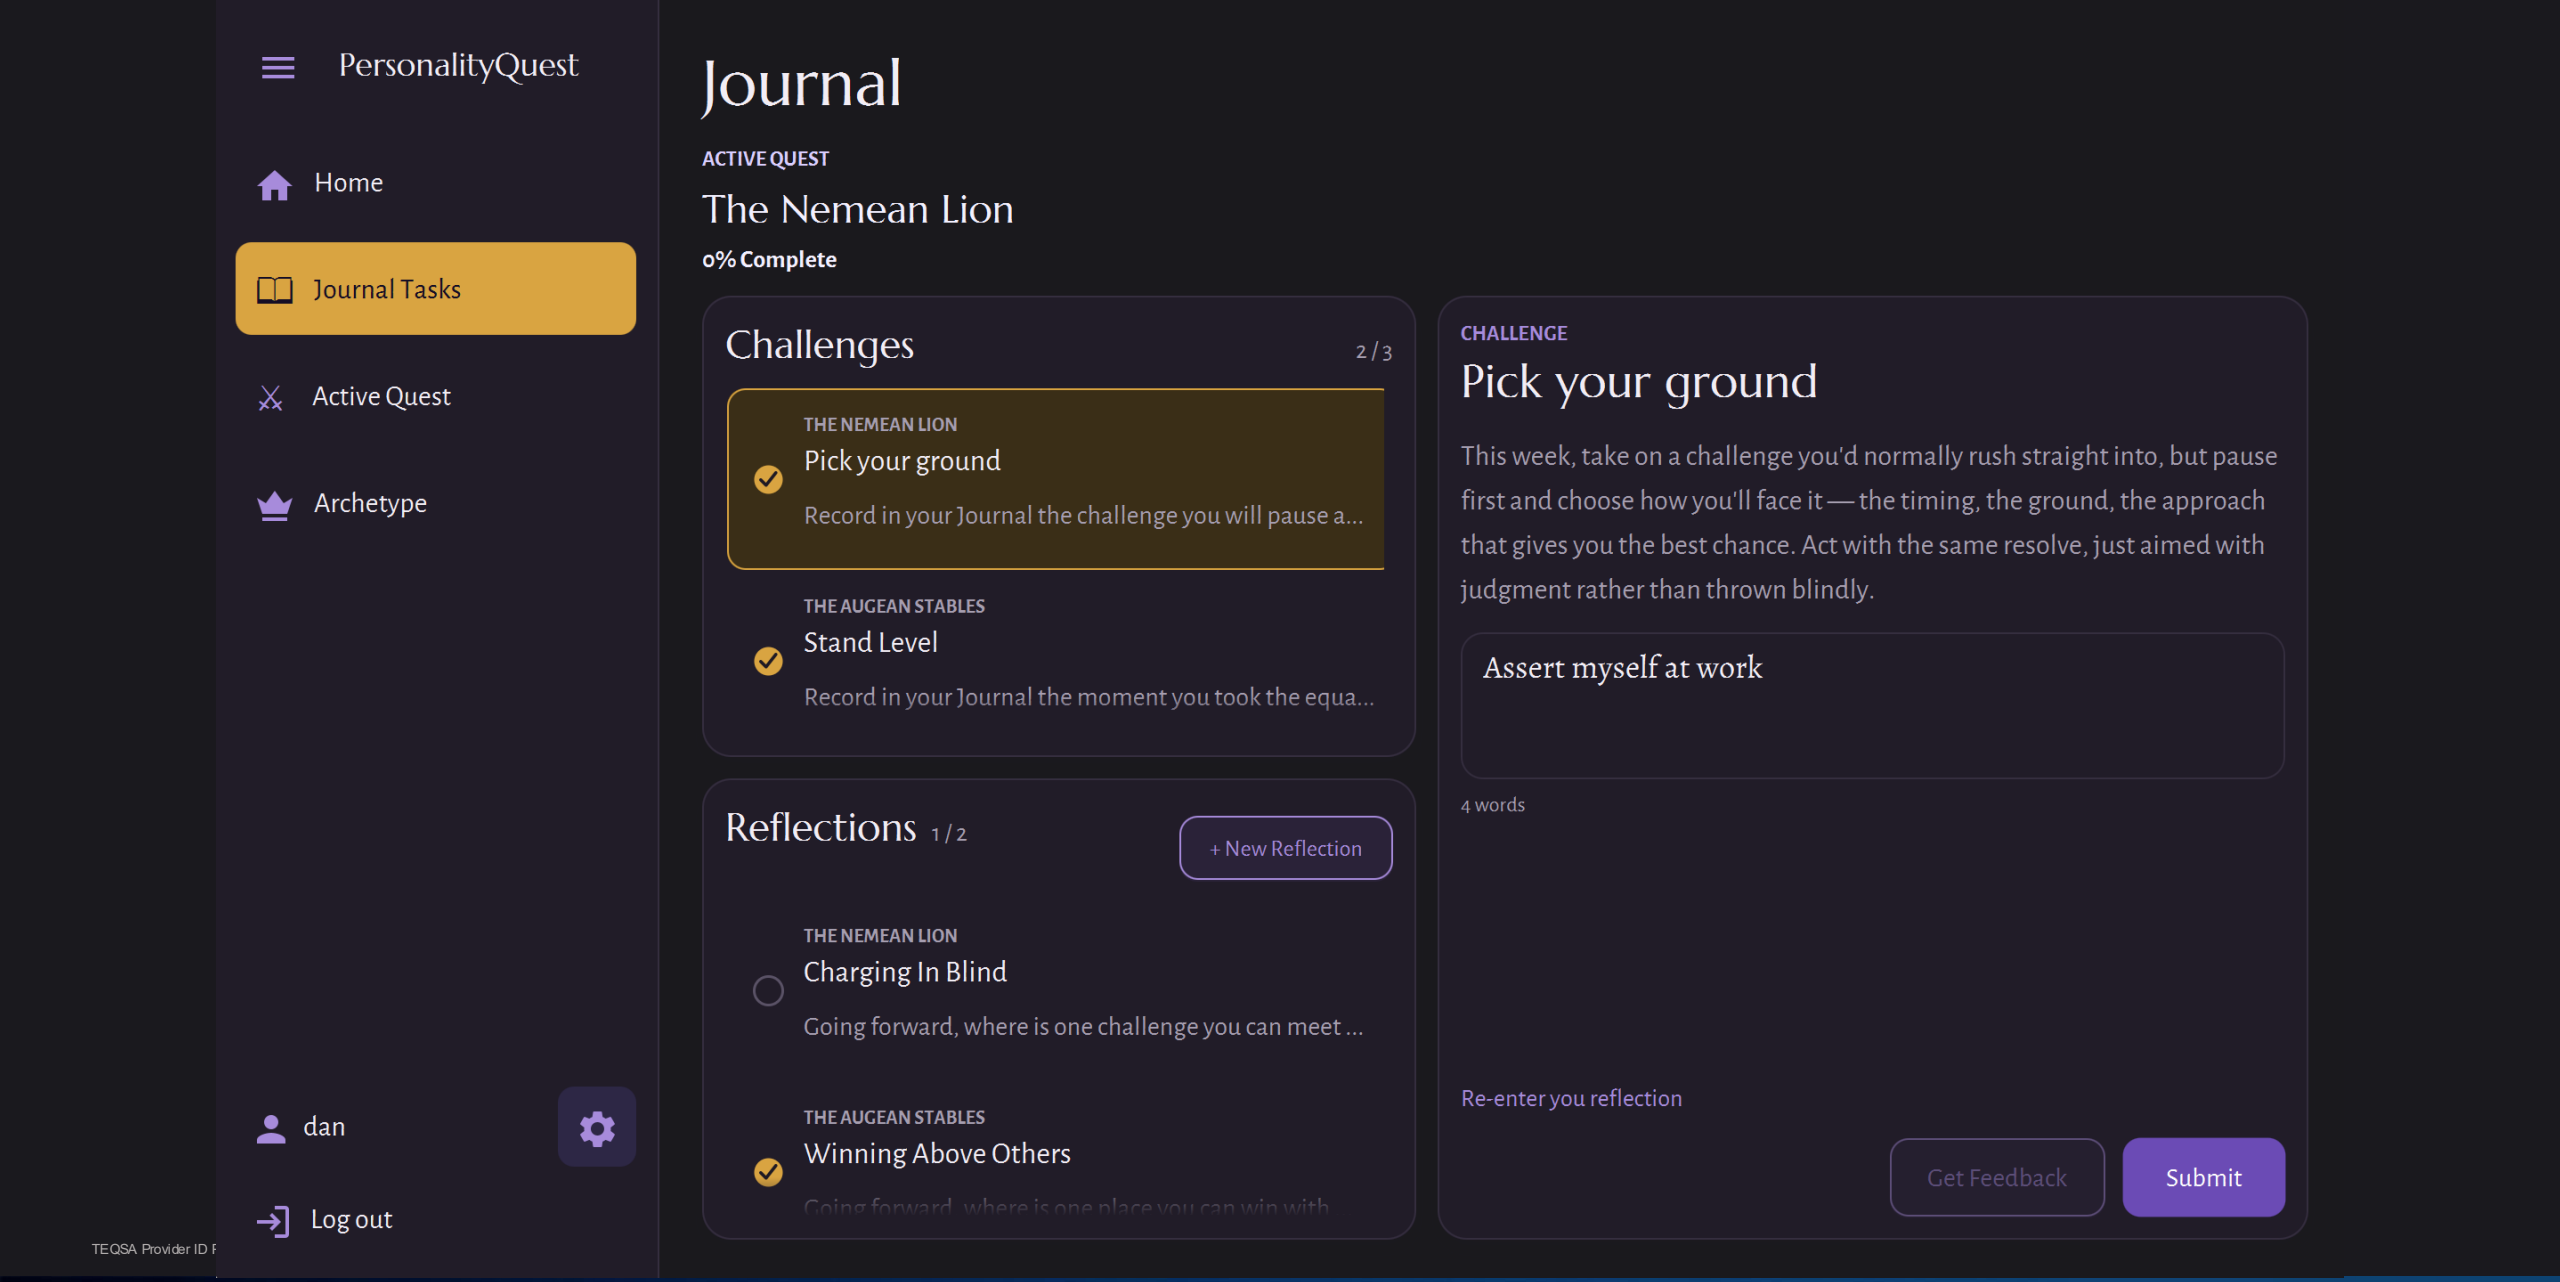

Charge it head-on — Throw the weapons aside and rush straight at the beast in the open, trusting raw strength and fury to overpower it before it can overpower you. No time to think; attack now, hard, and don't stop.

Force the fight now — Press the attack immediately where you stand, trading blows in the open rather than losing momentum — hesitation feels like weakness, and a hero fights the enemy in front of him.

Hold at a distance — Keep your weapons up and your ground, looking for the beast to tire or expose a weak point first — there's no sense closing with something you can't wound until you're certain of an opening.

How It Ended

Hercules did not win by being fearless, and he did not win by throwing himself at the beast. He won by facing the fear and thinking clearly inside it. When his weapons failed, he didn't freeze and he didn't charge — he changed the fight. He drove the lion into the dark of its own cave, where its speed and claws counted for less, and there he closed his arms around its throat and held on through everything it did to him, until it fell still.

THE AUGEAN STABLES
Winning Above Others
CHALLENGE
Pick your ground
This week, take on a challenge you'd normally rush straight into, but pause first and choose how you'll face it — the timing, the ground, the approach that gives you the best chance. Act with the same resolve, just aimed with judgment rather than thrown blindly.

How it starts

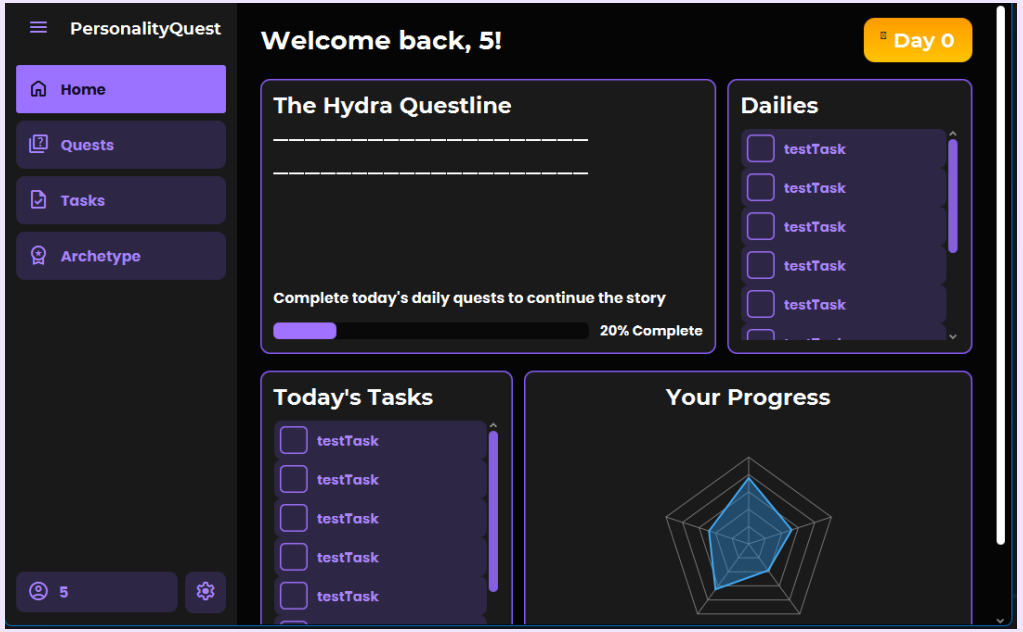

Initial user stories

Outline vision and potential, identify core user desires, plan and prioritise with MoSCoW frameworks

ID	User Story	Priority	Author	Acceptance Criteria
1	As a User, I want to log into my account so that I can access the application	Must-have	Leon	Given valid credentials, when submitted, then user is authenticated and taken to the dashboard; invalid credentials show an error and no session is created.
2	As a User, I want to register an account so that I can do the onboarding quiz	Must-have	Leon	Given valid required fields, when submitted, then account is created and user proceeds to onboarding quiz; duplicate/missing fields show validation errors.
3	As a User, I want to do the onboarding quiz so that I can get my archetype	Must-have	Leon	Given the quiz is started, when all questions are answered, then responses are saved and quiz is marked complete; exiting mid-quiz allows resuming later.
4	As a User, I want to be assigned an archetype based on my quiz answers so that I can understand what type of experience I get	Must-have	Leon	Given a completed quiz, when scored, then exactly one archetype is assigned and shown on the user's profile.
5	As a User, I want to set a personal goal, so my journey feels relevant to what I want	Must-have	Leon	Given a user post-onboarding, when they enter a goal, then it is saved and displayed on the dashboard; user can skip and set it later.

Develop a prototype

Start with basic UI, get something working, develop incrementally rather than in big steps- what do we think will work?

TEQSA Provider ID PRV12079 Australian University | CRICOS No.00213J

How we worked as a team

Regular Communication

Discord was used for health checks, major updates, questions, weekly meetings, quick discussion and to share progress

Team Coordination

GitHub projects showed visible priorities, ownership, deadlines, and progress of tasks

Meeting Scrums

Conduct weekly meetings in Discord, to create strategy, plan direction and split tasks and duties

Meeting	Week 7	**Date**	31/08/2026
Time	6h30pm – 7h30pm	**Location**	Discord
Attendees	Phuc Lam Vo Duy Ly Liam Korver		

Purpose

This week meeting is for us to talk about development of the application

Meeting Summary

In the meeting, we review the code that we have done in the past week, check for any errors. We also start building some GUIs of the application using fxml. We also focus on developing some services of the application.

Decisions Made

Decision	Reason or Notes
Everyone continues their work that they have been assigned on GitHub project	
Leon will prepare a GitHub action before the meeting next week for automatically checking errors before merging code	

<-- Change Made (CI)

TEQSA Provider ID PRV12079 Australian University | CRICOS No.00213J

Evaluating team dynamic

Practice	Impact	Limitation / trade-off
Discord check-ins	Fast unblocking and quick decisions	Decisions buried in chat; minutes weren't always complete
GitHub Projects ownership	Parallel feature development, clear accountability	Knowledge stayed siloed, so the dropout student's work was hard to pick up
Weekly scrums	Regular re-planning	Didn't rebalance workload fast enough after the dropout
A/B testing to settle disputes	Decisions based on user data, not opinion	Took time out of development

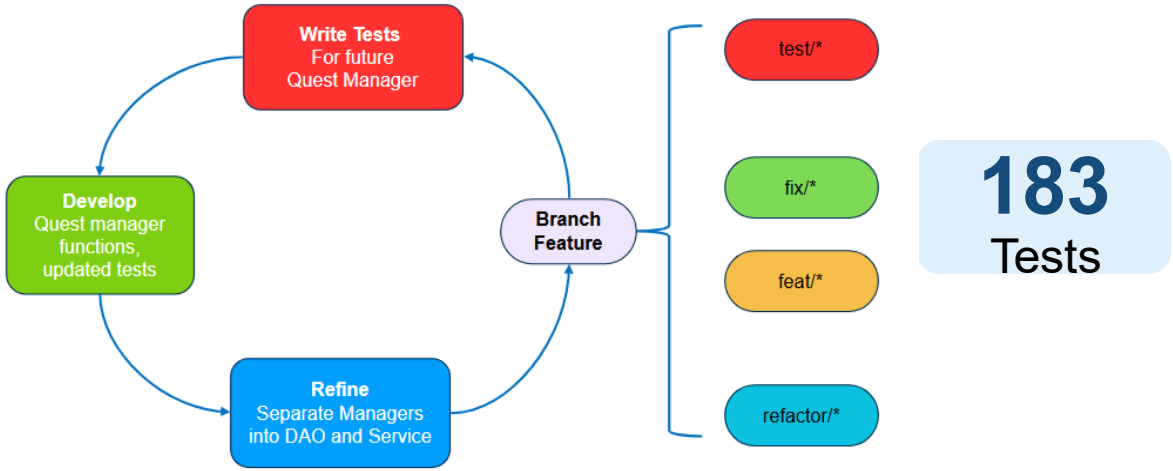

What we learned

Agree feature priorities early, keep task ownership visible, and revisit workload when team capacity changes.

TEQSA Provider ID PRV12079 Australian University | CRICOS No.00213J

Agile Development Practices

Test-Driven Development

183
Tests

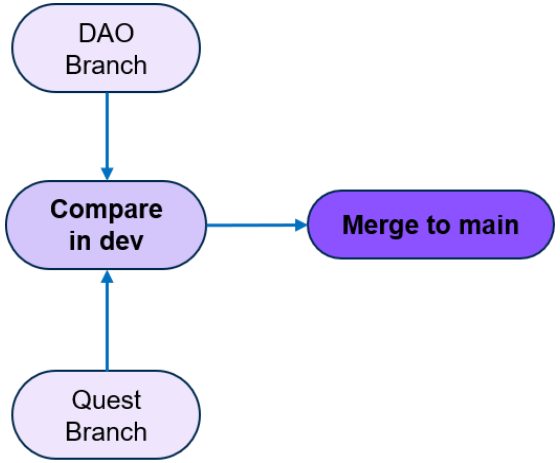

Strengths

- **Early feedback** on application behavior
- Supports refactoring by checking behavior

Limitations

- Requires **additional work** and to write initial tests
- Iterating features can break existing tests

Continuous Integration

Strengths

- Catches bugs before being merged into Dev
- Overall codebase is cleaner with clear feature iterations

Limitations

- Required everyone to follow the pipeline rules
- Possible false sense of security when merging

TEQSA Provider ID PRV12079 Australian University | CRICOS No.00213J

Key Technical Decisions

UI Mockup

Figma

High-quality design, interactive prototyping

OR

Canva

Easy to use, preset templates, design patterns

Trade off:

Only UI designs not live screens, Incompatible with Git

Content storage

SQLite

Lightweight, easy to use, persistent

OR

MySQL

Security, higher scaling, transactions

Trade off:

Security, serverless, rollback

AI Feedback

ChatGPT

Structured output, good feedback low cost

OR

Gemini

More personalized feedback, higher cost

Trade off:

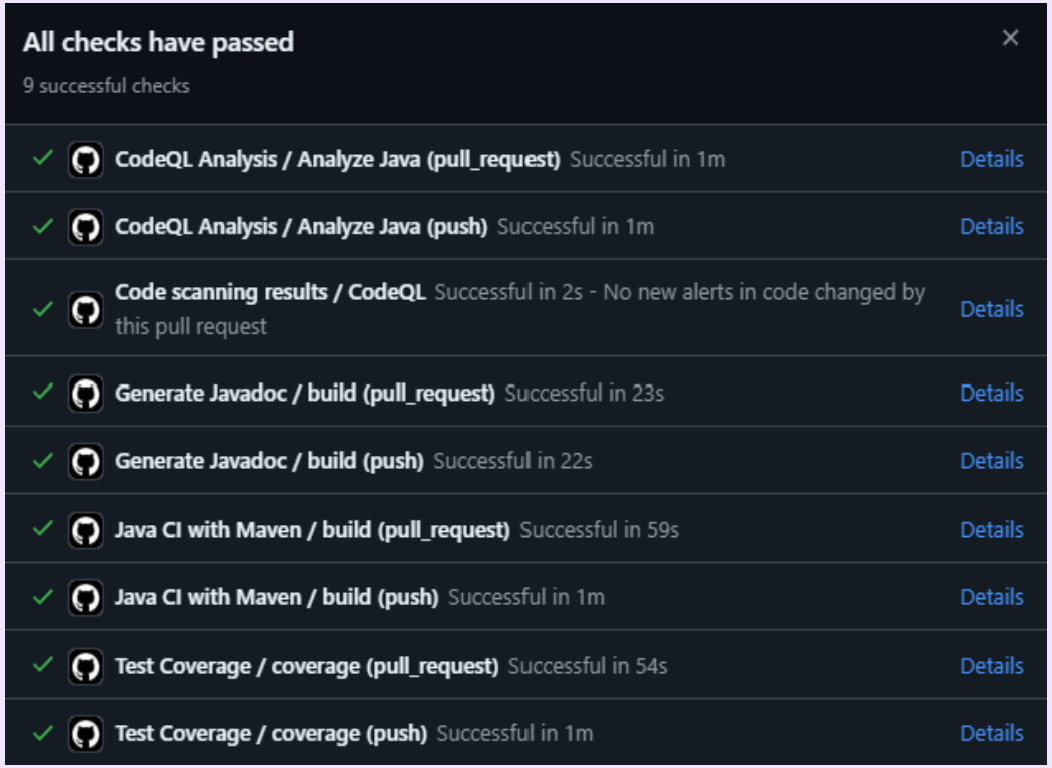

More personalized feedback and better storytelling

TEQSA Provider ID PRV12079 Australian University | CRICOS No.00213J

Quality Assurance – Workflows

Development & Integration

Use workflows to automatically run tests, ensure functionality and code quality

Strengths

- Check **build problems and scan security issues** before integration
- Gives **early feedback on the behaviours of the application** for safer iteration

Limitations

- Passing checks does not confirm the usability of the application
- Depends on the coverage of tests and scope of code scanning

Mitigation

- Setup and maintenance **reduce time** for feature development
- Waiting for checks **slows integration but increase confidence** in changes

TEQSA Provider ID PRV12079 Australian University | CRICOS No.00213J

Quality Assurance – Documentation

Traceability & Shared Knowledge

Record decisions, progress and ownership to support handovers and maintenance.

Package com.example.personalityquest.Applications.auth

```
package com.example.personalityquest.Applications.auth
```

Classes

Class	Description
AccountCreationApplication	Launches the account-creation screen
AccountSignInApplication	Launches the account sign-in screen
UpdateAccountPasswordApplication	Launches the password-update screen
UpdateAccountPersonalDetailsApplication	Opens the account personal-details screen

Strengths

- **Shared decisions** align with implementation
- Support **handovers and maintenance**
- Ownership **supports accountability**

Limitations

- Uneven distribution can create knowledge gaps
- Changing features can leave outdated records

Mitigation

- Record-keeping **competes with coding time**
- **Prioritise key behaviours** and drop unnecessary ones

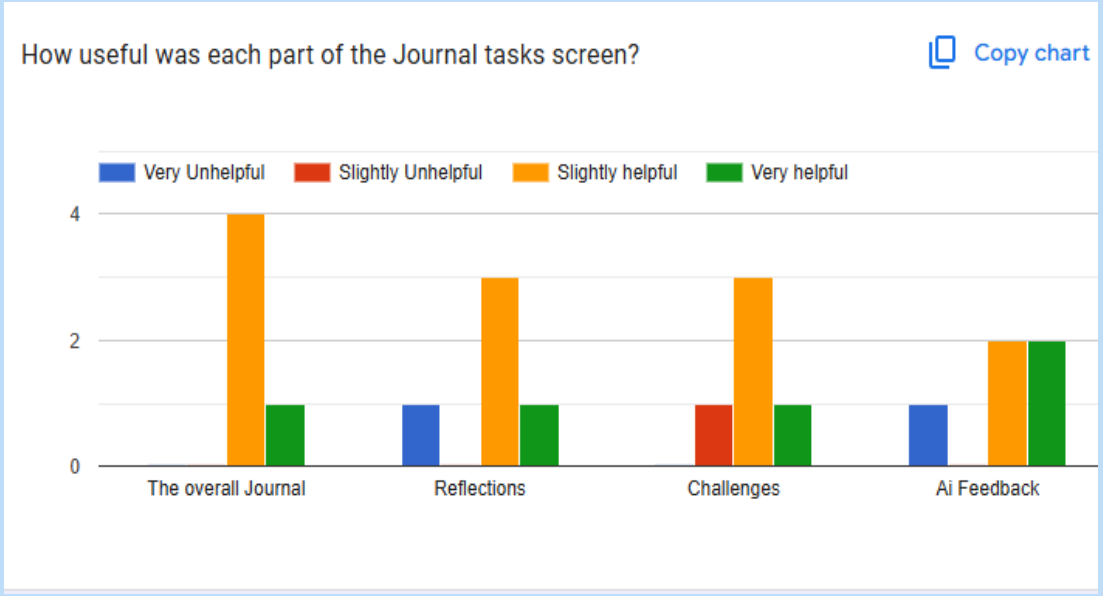

TEQSA Provider ID PRV12079 Australian University | CRICOS No.00213J

Quality Assurance – User feedback

9
Users Tested

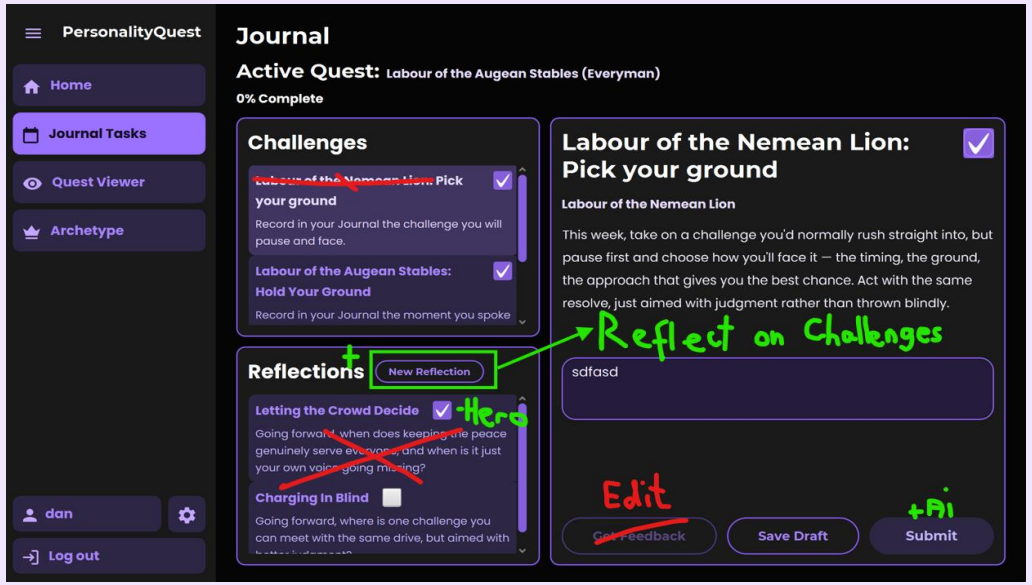

Ask real users

Perform real user testing, note what is simple/ confusing, ask questions about their experiences, what changes they want to see

Human-centred changes

Come together as a team to read user feedback and make changes based on what we think will improve the experience.

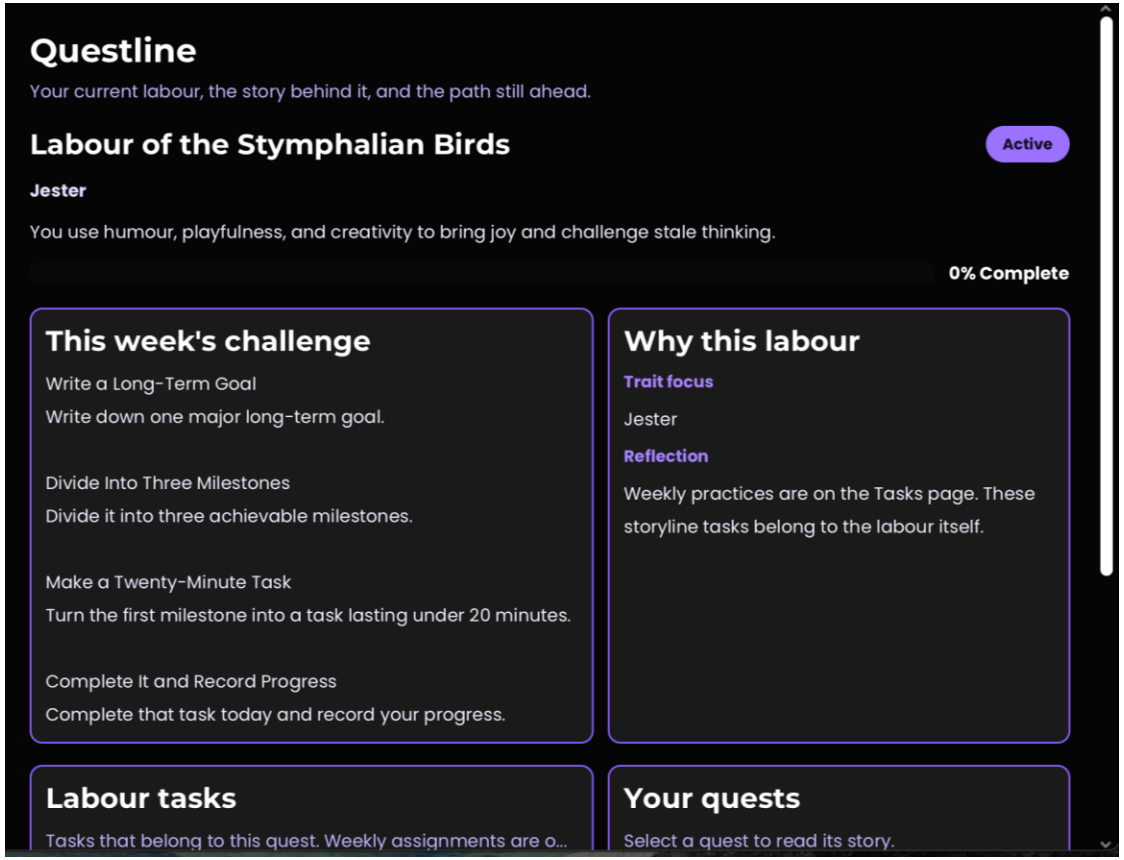

Effectiveness

- **User feedback challenged our assumptions**, guiding UI changes around users' needs
- **Prioritising reported difficulties** focused redesign on usability

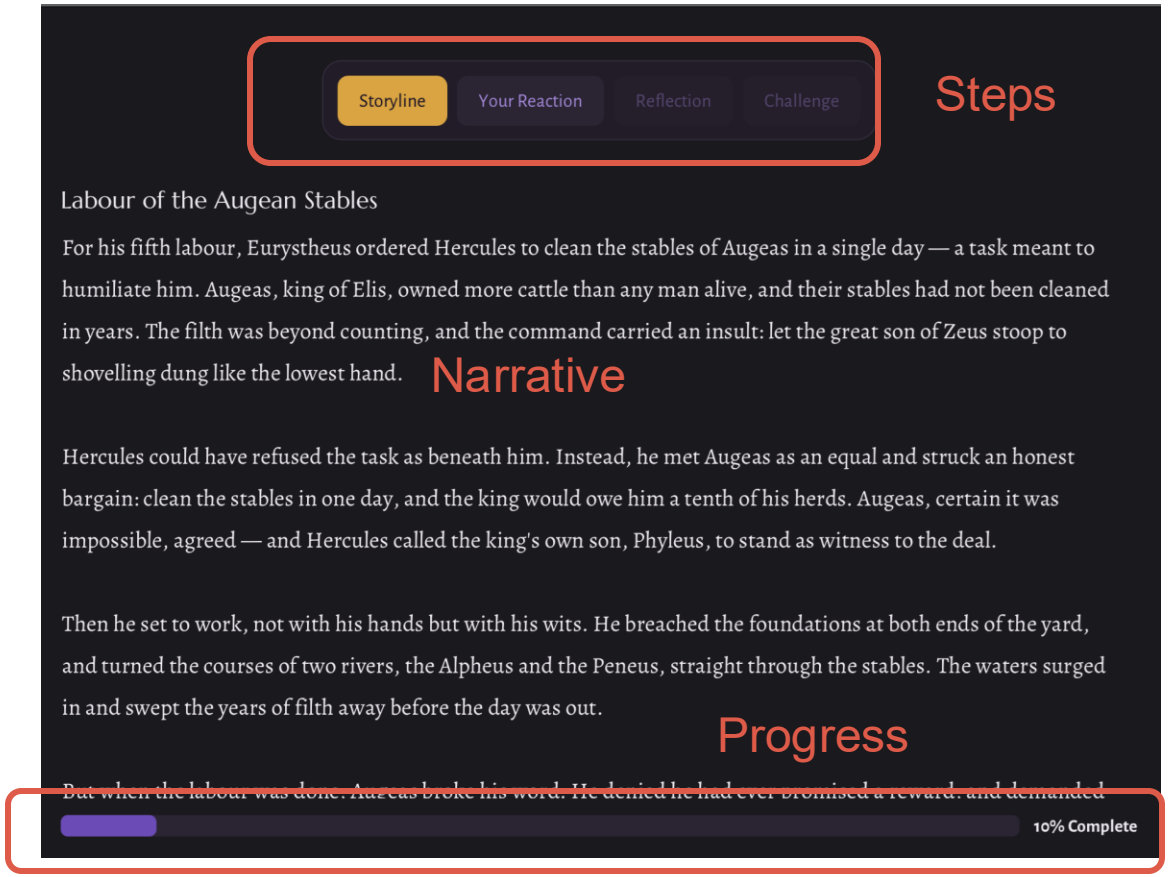

Limitations

- Nine users provided useful insights but may not represent the wider user group
- UI changes require re-testing to confirm they improve the experience

Before Testing

After Feedback

TEQSA Provider ID PRV12079 Australian University | CRICOS No.00213J

Key Lessons and Professional Insights

Ownership needs communication

Learned

There is **clear task ownership** by using GitHub Projects

Challenges

Progress updates are dependent on collaborators actively contributing to maintaining the project management tool.

Reconsider

Agree on update routines and raise concerns early

TDD is hard to coordinate

Learned

TDD **ensures the behavior** of the application is as intended.

Challenges

Changes to application requires updating tests with correct behaviors

Reconsider

Combine critical tests with user evaluation

Feedback needs follow-through

Learned

Feedback **informs changes** in the application to improve usability

Challenges

Fixes need time to be re-evaluated and confirmed.

Reconsider

Test earlier and reserve time to re-test for confirmation

TEQSA Provider ID PRV12079 Australian University | CRICOS No.00213J

Team Roles

Member	Area of Contribution
Phuc Lam Vo	Implement AI feedback, Quest services; build Maven, Javadoc, and CodeQL workflows; build settings, log in, sign up pages; refactor code and apply design patterns
Liam Korver	Build log in services, sign up services, weekly tasks services, account update quest services; refactor object-oriented designs and add design patterns.
Duy Ly	High-fidelity design, build profile page, streak services, badges; implement settings services
Daniel Fitton	Write content for Questions, Archetypes, Quests, Challenges, etc. Evaluate UI functionality based on user testing and update frontend to align with user desires.
