

Sustainable Habits Quest App

A gamified application where users build sustainable habits through personalised daily quests, skill progressions and streaks. No leaderboards because that is conflict of interest with “self-improvement”. Similar but branched off from Daniel’s habit building app, just reduced the story to be more generic (for the meantime).

Features

User Management:

- Register and log in
- User profiles and avatar customisation (if we have time)
- User classification into core Archetypes (e.g., Engineer, Mage, Wizard, etc.)
- Onboarding personality and lifestyle quiz (Myers-Briggs style)

Archetype and Level Progression:

- Level and XP system by quest completion and habit logging
- Achievement badges and milestone rewards
- No leaderboards because that’s conflicting with a “self-improvement” mindset.

Habit and Quest Tracking

- View habit log (daily transport, meal prep, waste reduction)
- Daily and weekly quests
- Daily streaks

Smart Recommendation

- AI analyses the onboarding quiz results + user activity to suggest:
 - Personalised daily quests tailored to weak spots
 - Adaptive difficulty depending on user’s skills and abilities
 - Personalised habit building tips

Dashboard:

- Users can track progress through the dashboard which contains:
 - Level, xp, archetype
 - Quests completed and current streak
 - Estimated emission and waste saving

Sustainability Pillars:

People:

- Myers-Briggs style quiz fostering personal interest and discovery
- Archetype-based challenges which tends towards human association and psychology

Planet:

- Direct reduction of personal carbon footprint and household waste

Prosperity:

- Encourages money-saving habits (energy efficiency, zero-waste budgeting)

Education:

- Users learn habits tailored to their natural personality traits

SWOT Analysis

Strength:

- Personality classification creates strong user engagement because it creates a personal association with the user
- Archetypes and level progression feel intuitive and rewarding
- AI personalisation keeps quests aligned with the user's lifestyle
- Covers all four sustainability pillars

Weakness:

- Depends on honest self-reporting during the quiz and daily habit logging
- Requires balanced XP distribution to keep leveling fair and engaging

Opportunities:

- Partnerships with schools or workplaces for archetype-based leaderboards

Threats:

- Existing generic habit-tracking applications
- Potential user fatigue if daily quests feel repetitive over time
