

Community Circular Economic Hub

A platform where people can borrow, repair, donate, and learn to repair instead of throwing away products.

Features:

User Management:

- Register and log in
- User profiles
- User roles
- Skills and interests

Items Management:

- View items (items name, history of repair, etc)
- Borrow Items
- Create items for lending

Workshops and Events:

- Create repair/DIY workshops
- User register attendees
- Event calendar
- Rate the workshops

Smart Recommendation:

- AI analyse the image of the product that user send and suggest:
 - + Is this worth repair
 - + Repair tutorial (can include link if possible)
 - + Shops nearby repairing the product

Sustainability Dashboard:

- User can see their impact through dashboard containing this:
 - + Items repaired
 - + Items donated
 - + CO2 avoided
 - + Money saved
 - + Workshops attended

Sustainability Pillars:

People:

- Sharing knowledge
- Build networks

Planet:

- Reduce waste

Prosperity:

- Create affordable and accessible access to items

Education:

- People have chance to learn to repair

SWOT Analysis:

Strength:

- Cover all sustainability pillars
- Promote repairing, and donating to reduce waste
- Extend products lifecycle
- AI-Integrated feature for repairing recommendation
- Improves accessibility and affordability for many people

Weakness:

- Requires strong user participation
- Trust and safety issues while lending items
- Item availability for borrow
- Repair quality management

Opportunities:

- People get educational workshops and certifications
- Growing demand for sustainability
- Partnerships with local business

Threats:

- There are existing marketplaces for buying and selling old products
- There are Youtube tutorials for repairing, or using old products for DIY
